Conduction velocities (V) and diameters (Ø) of afferent and efferent nerve fibres

Figure 9: Classification scheme for human peripheral nerve fibers. Conduction velocities (V) and nerve fiber diameters (Ø) of afferent and efferent nerve fiber groups in normal humans and in patients with a traumatic spinal cord lesion for 0.5 to 6 years. The splitting of the α1-motoneurons into the 3 subgroups, α1, α12, α13, has not yet been confirmed. This is the only existing classification scheme for human nerve fibers!
