## Peer Review Mechanism

Peer review mechanism of Peertechz is a proven system to assess the quality of research and its presentation, prior to publication. Anonymous and efficient reviewers and editors with immense experience in the related field scrutinize the submitted manuscripts. The validity and originality of the manuscripts are judged on different levels of evaluation. The main aim is to publish an article which can be breakthrough in its area of study. According to a survey more than 1.5 million scholarly articles in different academic streams are published each year, therefore Peer review becomes a prominent tool to select which research should be brought to the attention of other researchers. It also gives authors feedback to improve the quality of their research papers before publication. The peer review system judges the validity, significance and originality of the work, rather than who has done it.
