Vasodilatory Effect of the Dissolved Glycine locally applied on Pial Microvessels

Published On: October 14, 2017 | Pages: 034 - 037

Author(s): Tyukina ES*, Sheshegova EV, Nartsissov YR, Podoprigora GI

By the method of biomicroscopy it was shown that a single application of a dissolved glycine on the parietal region of the rat brain (“open window” technique) leads to a vasodilatation - an increase in arteriolar diameter about 1.5-2 times. There were no changes in the microcirculation when saline applied under similar conditions. ...

Peripheral arterial disease and cardiovascular risk. The importance of Doppler in multi-pathological population

Published On: September 15, 2017 | Pages: 026 - 033

Author(s): M Martín Asenjo*, JM Martín Guerra, C Rodríguez Martín, L Iglesias Gómez, PJ Mújica Addimandi, D Bóveda Ruiz, C Jauset Alcalá, A Almaraz Gómez and E González Sarmiento

Objective: The aim of this study is to calculate cardiovascular risk (CVR), vascular age (VA), and prevalence of peripheral arterial disease (PAD) in the multi-pathological population admitted to Internal Medicine services, as well as to study the relationship between PAD and Mönckeberg’s calcification with VA and cardiovascular risk factors (CRF) in this population ...

Zero-Flow Pressure of the Cerebral Microcirculatory Bed at Concomitant Traumatic Brain Injury
Zero-flow pressure (ZFP) is an important parameter of a microcirculation. The aim is to determine the status of the ZFP at concomitant traumatic brain injury with and without the development of intracranial hematomas. ...
Background: There are no safe operations in cardiac surgery. Every operation can possibly go wrong. We therefore retrospectively evaluated all cardiac operations lasting more than 300 minutes of bypass time at our institution to evaluate outcome and factors relevant for perioperative mortality and morbidity. ...

A Suspected Complication of Radial Access Gone Good

A female patient, 43 years of age, was scheduled for coronary angiography due to suspicion of coronary heart disease on the basis of cardiovascular risk factors: obesity, arterial hypertension, hypercholesterolemia, CCS II angina and positive ECG exercise test. ...

Fever Induced Brugada Syndrome

Brugada syndrome is a heterogeneous genetic channelopathy that predisposes to ventricular arrhythmias and sudden cardiac death (SCD). ...
