sports medicine clinic with a clinical or magnetic resonance imaging confirmation of knee meniscal tear and who subsequently received an injection of intra-articular hyaluronic acid.

A Retrospective analysis of Five Years Musculoskeletal Injury Data in British Infantry Recruits

Published On: August 19, 2017 | Pages: 032 - 038

Author(s): Robert Heagerty, Jagannath Sharma* and Jane L Clayton

Background: Musculoskeletal injury (MSKI) has been identified as a threat to the effectiveness and productivity of military training organisations globally. The burden on the medical chain, occupational disposal and the loss of working days due to temporary functional restriction challenges organisational efficiency and ultimately operational capability whilst also re...

Efficacy of Liposomal Bupivacaine in Orthopedic Procedures in an Academic Trauma Hospital

Published On: August 08, 2017 | Pages: 027 - 031

Author(s): Michael C Ott*, Julia Powers, Christian Bernhardi, Ciera Patzke, Eugene Przespoleski and Kari A Mergenhagen

Background: Alternatives to opioids have been sought to control postoperative pain given the opioid epidemic. Liposomal bupivacaine has been suggested to decrease postoperative opioid use and pain scores. The purpose of this study was to discover the effect of liposomal bupivacaine on postoperative pain scores and narcotic usage in orthopedic patients.
