Functional outcomes and rehabilitation efficiency in patients with restricted weight-bearing

Published On: July 13, 2019 | Pages: 006 - 010

Author(s): Meredith Ogilvie-Brown* and Tik Chan

Orthopaedic injuries can require a period of restricted weight-bearing which can increase inpatient hospital admissions and place the patient at risk of the complications of immobility. This study aimed to identify the functional outcomes and rehabilitation efficiency for patients admitted to rehabilitation with restricted weight bearing.
