Testicular Cancer Mortality in Chile: Is it as high as we think? 41 years of experience in a single center

Introduction: Testicular cancer carries a good prognosis, with survival rates over 70% at any stage. According to the GLOBOCAN database, Chile has the highest mortality rate worldwide, without a clear explanation of why this is the case. The objective of this study is to contrast the observed deaths in a chilean center during a 41-year period, to the national data pre ...

Primary Obstructive Megaureter in Children: to Treat or not?

Objective: Primary obstructive megaureter has always been considered a developmental defect. Surgical and conservative treatments were compared through a retrospective study first, and then in a longitudinal observational study.

Materials and methods: Between January 1993 and January 2006 at our Department 42 cases of primitive obstructive megaureter were observed. ...
Case report of gangrenous cystitis in a post-partum female

Published On: September 24, 2019 | Pages: 005 - 008

Author(s): Jha Prabhat*, Joshi Bijendra Dhoj and Jha Binit Kumar

Background: Gangrenous cystitis is an extremely rare condition with very few cases reported in literature. Diagnosis is often delayed due to the nonspecific symptoms. A multidisciplinary team approach and surgical debridement is usually required for management. ...
