**Boerhaavia diffusa L. Supplementation Attenuates Fluoride Induced Testicular Impairments in rats**

Published On: November 07, 2017 | Pages: 027 - 035

Author(s): Shashi A, Khan I

The present study investigated the effect of oral administration of sodium fluoride on testicular histopathology of rats and evaluated ameliorative effect of Boerhaavia diffusa L. Adult male rats weighing 100-150g were administered with sodium fluoride (NaF) at three different doses 100, 200 and 300 ppm/kg body weight, orally, daily for 40 days. At the end of th ...

**Postnatal Changes in the Morphology of the Myocardium in Rat Ventricles**

Published On: March 10, 2017 | Pages: 011 - 017

Author(s): Georgi Kotov, Alexandar Iliev*, Boycho Landzhov, Lazar Jelev1, Iva N. Dimitrova, Dimka Hinova-Palova

Background: Aging of the myocardium is a dynamic process which involves progressive loss of cardiomyocytes due to necrosis and apoptosis, interstitial fibrosis and reactive hypertrophy of the remaining vital cardiomyocytes. In our study, we investigated the postnatal changes in the myocardium of 15 adult male Wistar rats, distributed in the following age groups: 2 ...

**Circadian Variations of Serum Mitochondrial Uncoupling Protein 1 (UCP1) Levels and Rectal Temperature in Capra Hircus**
The daily rhythm of body temperature is an important process to be studied not only to advance knowledge on the temporal variability of thermal homeostasis but also has a means to facilitate the study of biological rhythmicity in general. The aim of the present study was to study the daily rhythm of rectal temperature and the changes in the serum levels of mitochondrial transporters in healthy subjects.
Nitric oxide functions in the heart

Published On: September 15, 2017 | Pages: 020 - 026

Author(s): Tarik Kivrak*, Kenan Erdem and Ilgin Karaca

Nitric oxide (NO) is an important organizer of the cardiovascular function and is an important mechanism in hampering the pathogenesis of the diseased heart. The scenario of bioavailable NO in the myocardium is complicated: 1) NO obtain from both endogenous and exogenous NO synthases (NOSs) and the number of NO from exogenous sources varies considerably ...

Double outlet right ventricle, total anomalous venous return, total anomalous hepatic venous drainage and supra mitral ring in a child with Ivemark's syndrome

Published On: July 20, 2017 | Pages: 018 - 019

Author(s): Girish Gowda SL*, Seetharama Bhat PS, Jayaranganath Mahimarangaiah and Cholenahally NM

Double outlet right ventricle, total anomalous venous return, total anomalous hepatic venous drainage and supra mitral ring with Ivemark syndrome is an unusual combination of cardiac malformations. These complexities of congenital anomalies can pose problem in preoperative diagnosis and surgical management. ...
