Boerhaavia diffusa L. Supplementation Attenuates Fluoride Induced Testicular Impairments in rats

Published On: November 07, 2017 | Pages: 027 - 035

Author(s): Shashi A, Khan I

The present study investigated the effect of oral administration of sodium fluoride on testicular histopathology of rats and evaluated ameliorative effect of Boerhaavia diffusa L. Adult male rats weighing 100-150g were administered with sodium fluoride (NaF) at three different doses 100, 200 and 300 ppm/kg body weight, orally, daily for 40 days. At the end of th ...
The daily rhythm of body temperature is an important process to be studied not only to advance knowledge on the temporal variability of thermal homeostasis but also has a means to facilitate the study of biological rhythmicity in general. The aim of the present study was to study the daily rhythm of rectal temperature and the changes in the serum levels of mitochon ...

Ischemical Problems after Filler Injections: Anatomical Details and Practical Guide Lines to Avoid Disasters

Introduction: Soft-tissue filler injection is a very common procedure all around the world. Although the safety profile for these products is favorable, adverse events can occur, ranging from mild to severe in intensity. ...

Protective and curative effects of Boerhaavia diffusa L. against fluoride induced renal oxidative stress and antioxidant enzymes in rats

This work elucidated the protective effect of leaf extract of the Boerhaavia diffusa L. (punarnava) on kidney damage following fluoride administration in rats. Forty eight rats were randomly divided into eight group’s six rats in each. Group I was administered deionized water orally served as control. Group II and III were administered with 300 and 600 ppm NaF/kg ...
Nitric oxide functions in the heart

Published On: September 15, 2017 | Pages: 020 - 026

Author(s): Tarik Kivrak*, Kenan Erdem and Ilgin Karaca

Nitric oxide (NO) is an important organizer of the cardiovascular function and is an important mechanism in hampering the pathogenesis of the diseased heart. The scenario of bioavailable NO in the myocardium is complicated: 1) NO obtain from both endogenous and exogenous NO synthases (NOSs) and the number of NO from exogenous sources varies considerably ...

Double outlet right ventricle, total anomalous venous return, total anomalous hepatic venous drainage and supra mitral ring in a child with Ivemark`s syndrome

Published On: July 20, 2017 | Pages: 018 - 019

Author(s): Girish Gowda SL*, Seetharama Bhat PS, Jayaranganath Mahimarangaiah and Cholenahally NM

Double outlet right ventricle, total anomalous venous return, total anomalous hepatic venous drainage and supra mitral ring with Ivemark syndrome is an unusual combination of cardiac malformations. These complexities of congenital anomalies can pose problem in preoperative diagnosis and surgical management. ...
