Comparative Study of Glyceryl Trinitrate Ointment versus Lateral Internal Sphincterotomy in Management of Chronic Anal Fissure

Published On: April 30, 2016 | Pages: 013 - 016

Author(s): AR Bansal, Rathindra Tripura, Rajesh Godara* and Jaikaran

Aims and Objectives: To prospectively evaluate and compare effectiveness of topical 0.2% glyceryl trinitrate ointment vs lateral internal sphincterotomy in treatment of patients with chronic anal fissure. Material and Methods: The study included a total of 50 patients presented with chronic anal fissure, divided into two groups by computer generated randomization. Gr ...
Weight Loss after Bariatric Surgery

Obesity is a large and growing health problem in the UK with high associated costs to the NHS. Bariatric surgery is proven as an effective treatment for obesity associated with long term weight loss and a reduction in obesity related comorbidities [1]. The NICE guidance highlights the importance of follow-up post-surgery [2]. The guidelines state that in order to be e ...
commonly found as an incidental diagnosis by imaging studies due to his lack of symptoms; nevertheless it is associated with many complications when undiagnosed like pseudomixoma peritonei a condition with high morbidity and mortality. This is the importa ...
