Prevalence of malnutrition in a tertiary hospital in Turkey: overlooked subject?

Aims: The study evaluated children’s nutritional status at the moment of hospitalization. Patients and Methods: The nutritional status of 113 hospitalized patients was retrospectively evaluated at the time of hospitalization in the Clinic of Pediatric Gastroenterology between May 2013 and November 2014. During hospitalization, height for age, weight for age, and we ...
Background: The laparoscopic surgery technique has rapidly spread because of its several advantages over conventional open surgery. ...

**Influence of Long-Term Use of Proton Pump Inhibitors on Esophageal and Gastrointestinal Precancerous Lesions or Carcinoma**

Patients with GERD and Barrett’s oesophagus should be encouraged to continue long term use of PPI therapy as a preventive measures for oesophageal adenocarcinoma. ...

**More Pronounced Reduction of Gut Bacteria in Crohn’s Disease than Ulcerative Colitis may have just Reflected Intimate Connection Rather than Difference of these two Diseases-A Different View on Findings Published in Gut**

I read with great interest a paper published recently in Gut [1], as its finding that patients with Crohn’s disease (CD) have more pronounced reduction and dysbiosis ...
