Duodenal Eosinophilia and Gastroparesis: Is there a role?

Gastroparesis (GP) is a disorder that affects the motility of the stomach resulting in delayed gastric emptying (GE) without mechanical obstruction and has accompanying symptoms that include nausea, vomiting, early satiety, bloating, and epigastric pain. It was reported that increased eosinophils were identified in the first part of the duodenum in a subset of pa ...
Left Hepatectomy for Hepatocellular Carcinoma left liver with underlying cirrhosis and portal hypertension

Published On: April 11, 2018 | Pages: 015 - 017

Author(s): Kaushal Yadav*

Introduction: Hepatocellular carcinoma (HCC) is a major public health problem worldwide and is the second most common cause of cancer related deaths worldwide. If liver functional reserves and future liver remnant are adequate than liver resection is preferred choice in Child Pugh class A and selected cases of early Child Pugh class B, while Child Pugh B and C are can ...
