Duodenal Eosinophilia and Gastroparesis: Is there a role?

Published On: February 07, 2018 | Pages: 001 - 004

Author(s): Sharareh Moraveji, Mohammad Bashashati, Ben Alvarado, Irene Sarosiek, Alireza Torabi and Richard McCallum

Gastroparesis (GP) is a disorder that affects the motility of the stomach resulting in delayed gastric emptying (GE) without mechanical obstruction and has accompanying symptoms that include nausea, vomiting, early satiety, bloating, and epigastric pain. It was reported that increased eosinophils were identified in the first part of the duodenum in a subset of pa ...
Left Hepatectomy for Hepatocellular Carcinoma left liver with underlying cirrhosis and portal hypertension

Published On: April 11, 2018 | Pages: 015 - 017

Author(s): Kaushal Yadav*

Introduction: Hepatocellular carcinoma (HCC) is a major public health problem worldwide and is the second most common cause of cancer related deaths worldwide. If liver functional reserves and future liver remnant are adequate than liver resection is preferred choice in Child Pugh class A and selected cases of early Child Pugh class B, while Child Pugh B and C are can ...

Incarcerated Giant Hiatal Hernia conditioning hearth shock: case report

Percutaneous choledocho-duodenal shunt for malignant biliary obstruction

Published On: April 12, 2018 | Pages: 018 - 019

Author(s): Saburo Kakizoe*, Yumiko Kakizoe, Hiroshi Kakizoe and Keiji Kakizoe

We developed a new method: percutaneous choledocho-duodenal shunt (PCDS) for complete biliary obstruction patient. At first, percutaneous transhepatic cholangio drainage (PTCD) is performed as usual manner with local anesthesia. After the patient is recovered from bilirubinemia, percutaneous endoscopic gastrostomy (PEG) is performed with pull-through method under loc ...
