The Necessity of Nephrology Consultation for Critically Ill Patients with Acute Renal Failure

Background: Acute renal failure (ARF) continues to be a challenging problem in critically ill patients. We reviewed the nephrology consultations in our ICU to assess the necessity of those consultations and if there are any clinical criteria to indicate a necessary consultation.

Impact of Glomerular Filtration Rate on Intravenous Thrombolytic Therapy in Acute Ischemic Stroke: A Retrospective Study from a Single Italian Center

Aim: Chronic kidney disease (CKD) is a risk factor for stroke and in-hospital mortality due to stroke. Stroke is highly prevalent in CKD patients. Our aim was to evaluate the impact of glomerular filtration rate in acute ischemic stroke (IS) patients after thrombolytic therapy.

Emergency JJ Stent for Septic Shock under Remifentanil Sedation - An Option
Background: Acute renal failure (ARF) continues to be a challenging problem in critically ill patients. We reviewed the nephrology consultations in our ICU to assess the necessity of those consultations and if there are any clinical criteria to indicate a necessary consultation. ...
