Physician Death by Suicide: Problems Seeking Stakeholder Solutions

Published On: May 25, 2016 | Pages: 020 - 025

Author(s): Tracy D. Gunter*

Each year approximately 400 physicians die by suicide in the United States, leaving an estimated one million patients without their physicians [1-5]. Physicians are two to three times more likely to die by suicide than members of the general population and are more likely to die by suicide than other professionals [6,7]. ...

Background: Cognitive theories posit that small animal phobics develop a hypervigilance-avoidance attentional pattern when coping with threat. However, empirical research has failed to obtain consistent results. We aimed at addressing this issue by diminishing the methodological flaws that hinder the internal and ecological validity of previous studies. ...

**From Black Bile to the Bipolar Spectrum: A Historical Review of the Bipolar Affective Disorder Concept**

Published On: May 05, 2016 | Pages: 010 - 015

Author(s): Justin Thomas* and Ian Grey

The terms melancholia and mania have their etymologies in classical Greek. Melancholia is derived from ‘melas’ (black) and ‘chole’ (bile), highlighting the term’s origins in pre-Hippocratic humoral theories [1]. Where depression/melancholia was viewed as an excess of black bile, the humoral perspective saw mania as arising from an excess of yellow bile [2], or a mixtu ...
