Physician Death by Suicide: Problems Seeking Stakeholder Solutions

Each year approximately 400 physicians die by suicide in the United States, leaving an estimated one million patients without their physicians [1-5]. Physicians are two to three times more likely to die by suicide than members of the general population and are more likely to die by suicide than other professionals [6,7].

Anorexia Nervosa and Obesity: A Psychological Health Comparison

The aim of this pilot study was to compare psychopathological features and psychological health between women presenting anorexia nervosa (AN) and those presenting obesity (OB).

Different Patterns of Attentional Bias in Subjects with Spider Phobia: A Dot Probe Task using Virtual Reality Environment

Background: Cognitive theories posit that small animal phobics develop a hypervigilance-avoidance attentional pattern when coping with threat. However, empirical research has failed to obtain consistent results. We aimed at addressing this
issue by diminishing the methodological flaws that hinder the internal and ecological validity of previous studies. ...
