Monitoring problems in suicide action

Published On: June 06, 2020 | Pages: 023 - 029

Author(s): Valach Ladislav*

Considering suicide in action terms and pointing out that it a distorted action, we describe some of the distortions as problems in self- and action- monitoring. Problems in pain, emotion and awareness as self- and action-monitoring systems were found in suicide actions and projects. We expanded these by the conception of a suicide action in its self-monitoring functi ...
A narrative review of major depressive disorder in children and adolescents

Published On: May 06, 2020 | Pages: 019 - 022

Author(s): Pratibha Gehlawat and Virender Kumar Gehlawat

Major depressive disorder is a substantial health problem that affects people of all ages. Researchers have estimated that 2-6% of children and adolescents in the community suffer from depression. Major depressive disorder in children and adolescents is a chronic and relapsing condition, which does not remits spontaneously. A major proportion of depression in children ...

History of depression through the ages

Published On: May 06, 2020 | Pages: 010 - 018

Author(s): Michel Bourin*

Depressive thoughts appeared from the origins of Humanity. They are found in philosophical writings and in literature since Antiquity. They have been approached in a religious or medical way since always, with conceptions which sometimes mixed physiological and mystical explanations. With the advent of psychiatry as a medical discipline, depressive disorder was includ ...

Oxytocin and the role of “regulator of emotions”: Definition, neurobiochemical and clinical contexts, practical applications and contraindications

Published On: April 10, 2020 | Pages: 001 - 005

Author(s): Giulio Perrotta*

In the field of neuroscience applied to emotions and affects, some hormones have been studied for their relational and social activation capacity. Among these, the peptide hormone called oxytocin, long known for the induction of birth contractions and other physiological functions, is involved in attachment, confidence and reduction of anxiety, facilitating the stabil ...
Posttraumatic stress disorder concerning the end of the covid-19 lockdown: A mini review

Published On: April 15, 2020 | Pages: 006 - 009

Author(s): Michel Bourin*

Posttraumatic Stress Disorder (PTSD) occurs generally two months after an acute stress. We challenge the opportunity to observe an increase of PTSD after the end of the confinement induced by the pandemic of covid-19. PTSD can develop in response to exposure to an extremely stressful or traumatic event, or an exceptionally threatening situation. Examples include rape, ...

The mental health and wellbeing of medical students-A case study reflection

Published On: June 22, 2020 | Pages: 033 - 036
Introduction: Depression is one of the most commonly diagnosed mental disorders among adults, previously seen as an acute and self-limiting illness, but is now recognised as a chronic, lifelong illness. The importance of mental health and wellbeing has been recognised among young adults and moreover healthcare professionals. Interviewing a patient with chronic anxiet...
