Recurrent thrombosis in a multiple myeloma patient with low risk for thrombosis despite being on thromboprophylaxis

Published On: February 19, 2019 | Pages: 003 - 005

Author(s): Chow Siew Kian* and Fu Mei Sian

It is a well-known fact that multiple myeloma (MM) patients have an increased risk for thromboembolic events involving both the venous and arterial territories. The etiologies can be multifactorial, for example, activation of procoagulant factors, acquired protein C resistance, MM-specified and treatment-related factors. The risk of venous thrombosis is high when pati ...
