Objective of the present study was co-relating blood grouping with selfie lover. A questionnaire was prepared about Selfie lover. Total numbers of students were 169 students in this research and the average age of students was 18-22 years. All the students give answer according to their blood group. Results completed according to project. We took blood sample of every ...

Case Report

Disseminate intravascular coagulation may be the presenting feature for chronic myelomonocytic leukemia: Special case report

Published On: July 01, 2019 | Pages: 011 - 013

Author(s): Itir Sirinoglu Demiriz*
Chronic myelomonocytic leukemia (CMML) is a malignant myeloid stem cell disease accompanied by dysplasia in the context of myeloproliferative disease. Peripheral cytopenias (mainly anemia and thrombocytopenia) and hepatosplenomegaly are common findings. ...

Chronic demyelinating polyneuropathy associated with anti-ganglioside GQ1b antibodies in peripheral T-cell lymphoma

Published On: May 23, 2019 | Pages: 008 - 010

Author(s): Salem Bahashwan*, Carolyne Croizier, Xavier Moisset, Romain Guièze, Bertrand Evrard, Olivier Tournilhac, Jacques-Olivier Bay and Richard Lemal
Malignant lymphoma can cause peripheral neuropathy through various mechanisms. We report the case of 67-year-old man with chronic motor and sensory axonal demyelinating polyneuropathy associated with anti-ganglioside GQ1b antibodies in serum and cerebrospinal fluid (CSF) as an initial presentation of peripheral T-cell lymphoma, not otherwise specified. The patient was ...
Recurrent thrombosis in a multiple myeloma patient with low risk for thrombosis despite being on thromboprophylaxis

Published On: February 19, 2019 | Pages: 003 - 005

Author(s): Chow Siew Kian* and Fu Mei Sian

It is a well-known fact that multiple myeloma (MM) patients have an increased risk for thromboembolic events involving both the venous and arterial territories. The etiologies can be multifactorial, for example, activation of procoagulant factors, acquired protein C resistance, MM-specified and treatment-related factors. The risk of venous thrombosis is high when pati ...
