Potential Impact of Dialysate Magnesium on Intradialytic Hypotension

Published On: November 30, 2016 | Pages: 031 - 034

Author(s): Michael S Balzer, Janina Müller-Deile, Daniela I Schulze, Georg Eisenbach, Bernhard MW Schmidt, Hermann Haller and Roland Schmitt*

Numerous beneficial effects on cardiovascular health have been described for magnesium (Mg). Intradialytic hypotension (IDH) is a common complication in hemodialysis patients which contributes to cardiovascular mortality. It has been suggested that higher dialysate Mg (DMg) might reduce the risk of IDH. ...

Nephrolithiasis Associated with Normocalcemic or Hypercalcemic Primary Hyperparathyroidism: An Update on Medical Management

Published On: June 24, 2016 | Pages: 013 - 018

Author(s): Simone Brardi* and Ennio Duranti

Primary hyperparathyroidism (PHPT) is a disease involving a broad range of alterations of calcium homeostasis, sustained by parathyroid hormone (PTH) levels that are clearly abnormal. The anomalies directly associated with hyperparathyroidism are nephrolithiasis and fibrocystic bone disease. Open ...

Acute Management of Renal Colic and Compliance with National Standards: Closure of the Audit Loop

Published On: February 01, 2016 | Pages: 008 - 010

Author(s): Goonewardene SS* P Rajjayabun

Renal (ureteric) colic is a common surgical emergency. It is usually caused by calculi obstructing the ureter, but about 15% of patients have other causes, e.g. extrinsic compression, intramural neoplasia or an anatomical abnormality [1]. Up to 12 percent of the population will have a urinary stone during their lifetime, and recurrence rates approach 50 percent [2]. ...

**Parathyroidectomies: Pre and Post Op Usage of Calcium Supplementation and Effect on Calcium Levels**

Published On: February 01, 2016 | Pages: 005 - 007

Author(s): Goonewardene SS* and Ready A

Introduction: PTH is released from the parathyroid glands behind the thyroid and is the primary regulator of calcium homeostasis. Indications for surgery in hyperparathyroidism remain controversial but can include symptomatic disease, renal stones, impaired renal function, bone involvement or marked reduction in bone density. Due to hypocalcaemia post op, pre-op calci ...

**Hemodialysis with Polymethylmethacrylate Restores the Response to Hepatitis B Vaccination in Chronic Dialysis Patients: Hypothesized Mechanism of Action**

Published On: January 21, 2016 | Pages: 001 - 004

Author(s): Ralli Chiara, Imperiali Patrizio, Gabbrilelli Claudio, Conti Paolo, Lombardi Marco, Sidoti Antonino, Capitanini Alessandro, Piluso Adriano, Tekle Kiros Seble, Duranti Diletta and Duranti Ennio*

Patients undergoing hemodialysis often present with a reduced response to anti-hepatitis B virus (anti-HBV) vaccination. The soluble form of CD40 (sCD40) is elevated in hemodialysis patients and this has been shown to correlate with lack of response to anti-HBV vaccination. Due to its high molecular weight, conventional dialyzers cannot clear sCD40. Previous studies h ...

**Proliferative Glomerulonephritis with Monoclonal Immunoglobulin Deposition: Report of Two Cases and Review of Literature**

Published On: December 09, 2016 | Pages: 037 - 039
Here we report two cases of proliferative glomerulonephritis with monoclonal IgG deposits, a form of renal involvement by monoclonal gammopathy that mimics immune complex glomerulonephritis. Case 1 presented with incidental proteinuria and a renal biopsy showed mesangioproliferative glomerulonephritis with monoclonal IgG kappa deposits on immunofluorescence examination...

**Metformin Associated Lactic Acidosis without Organ Dysfunction and Effective Treatment**

Published On: December 06, 2016 | Pages: 035 - 036

Author(s): Mustafa Yaprak*, Feyyaz Bay, Müge Özsan, hasan Üstün and Faruk Turgut

Lactic acidosis generally occurs in those who have kidney, liver, lung or heart dysfunction. Herein, a 73-year-old woman diagnosed as type B lactic acidosis due to metformin without any organ dysfunction was presented.

**Membranoproliferative Glomerulonephritis Preceding Non-Hodgkin Lymphoma Recurrence: A Case Report**

Published On: August 13, 2016 | Pages: 024 - 025

Author(s): Meltem Sezis Demirci*, Cenk Gokalp, Cenk Demirci, Emrah Gunay, Ayhan Donmez, Sait Sen and Mehmet Ozkahya

Introduction: Membranoproliferative glomerulonephritis has been reported to occur in association with non-Hodgkin lymphoma but there is few information about glomerulonephritis response to the treatment of non-Hodgkin is lymphoma.

**Intractable Hematuria Due to Advanced Cardiac Failure and Venous Stasis**
A case of intractable gross hematuria in a patient with severe cardiac failure is presented. Diagnostic studies revealed venous stasis in bladder as the cause of this extensive bleeding. The clinical problems in the course of diagnosis and management of this rare and refractory condition case are discussed. ...
