Aims: The volatile general anesthetic sevoflurane is commonly used across all ages in the clinic. Sevoflurane-induced neurotoxic effects on the developing dopaminergic system are still unclear. The aim of this study was to evaluate the integrity of the D2/D3 receptor in developing rat brain utilizing molecular imaging techniques.

Witnessed Cardiac Arrest by Nigerian Health Workers; Improving the Outcomes

Published On: October 26, 2018 | Pages: 007 - 012

Author(s): Queeneth Ndukwe Kalu*, Oku Oboko Oboko, Oti Stephen, Kalu Ndukwe Nwaogburu

Aim: To assess the involvement of health workers in Cross River State, Nigeria with CPR during witnessed sudden cardiac arrest and the resources available to them for intervention. Settings and Design: The study was carried out in Cross River State, Southern Nigeria which has an international boundary with Cameroon in the East. It is a descriptive, Cross sectional...
