The Immunologic Relationship between Root Resorptions and Osteoclastic Activity - Literature Review

Published On: February 25, 2016 | Pages: 013 - 017

Author(s): Luciano Silva*, Alexandrino Pereira dos Santos Neto and Ana Paula Sobral

Current literature indicates the close relationship between root resorptions and the role of clasts responsible for hard tissue destruction. The process is complex and involves mechanical factors and intense biological activity. Immunological interactions stimulate the recruitment and migration of clasts into a specific area, in order to destroy bone, cementum and ...
