The Anemia that Halted Treatment: A case of Complicated Hyperlipidemia

Author(s): Mark M Mokhtar*, Catherine E Lempke and Ruth Agwuna
Familial hyperlipidemia is defined by abnormal levels of the following: low density lipoprotein cholesterol (LDL-C); high density lipoprotein cholesterol (HDL); triglycerides (TAG); or any combination of the three. ...

The Heart That Wasn’t Attacked: A Case of Transverse Myelitis

Author(s): Mark M Mokhtar*, Ahmed Ibrahim and Catherine E Lempke
Transverse myelitis is an autoimmune demyelination disease of the spinal cord that can present with a myriad of symptoms ranging from altered sensations, weakness, loss of bowel control and so forth. There are approximately 1400 new cases reported each year in the United States, but this is likely an underestimation, without a gender bias or familial predisposition a ...

Spontaneous Rupture of the Kidney Due to Acute Lymphoblastic Leukemia: The First Episode and a Glance on the Literature

Published On: February 05, 2018 | Pages: 003 - 006
Spontaneous rupture of the kidney consists of the atraumatic disruption of the renal parenchyma, followed by hemorrhage or leakage of urine into the perinephric space. ...
