Endoscopic removal of bullet lodged in nasal roof

Cases of survival after a penetrating firearm injury to the head are very uncommon. In cases where the bullet does not exit the head, it can be lodged anywhere in the cavities of the skull leading to fatal consequences. This case report examines a rare case of a penetrating firearm injury to the face where the victim survived and the bullet was discovered to be...

A Rare Presentation of Amniotic band syndrome: Antenatal diagnosis and perinatal management

The purpose of this presentation is to report the antenatal diagnosis and perinatal management of an amniotic band syndrome which occurred in the fetus of a pregnant 30-year-old Thai woman who presented at the gestational age of 21 weeks. ...
A 21 year old man was complaining of pain in a toe with swelling, which was interfering with his walking. The lesion was itchy and nodular. He thought he had been bitten and the insect had left a bump and black mark on the skin.

Infection from Tiny, Unwanted Travel Companions

50 year old woman presented at surgery on return from a holiday in Tanzania. She was complaining of multiple, small red, very itchy, lesions scattered round her waist line, on the inside of thighs and upper arms. She had been scratching these areas and there was now reddened skin, with lacerations on her thighs, seeping of the wounds and small patches of sepsis.
