Background and aims: Resting Energy Expenditure (REE) is one of the most important metabolic parameters since it accounts for 60%-70% of total energy expenditure (TEE) in a typical population and 80%-90% in a sedentary one. Accurate measurement of REE is essential for weight control, nutrition management, and disease treatment. Though metabolic carts, desktop metaboli ...

Physical Literacy for life: the facts, the trends, and the effects

Published On: April 13, 2020 | Pages: 009 - 011

Author(s): Fabiano Henrique Rodrigues Soares*

As sedentary related cardiometabolic outcomes have increased worldwide for the past decades, stimulating a physically active lifestyle among younger populations is imperative. Physical education, as a key tool to develop physical literacy (PL), can reverse this global trend using different approaches. Observational and experimental research must be conducted to address ...
