An Evolutionary Change in First Case on Time Starts Using Perioperative Process Improvement, Communication and Enhanced Data Integrity

Published On: March 20, 2017 | Pages: 013 - 016

Author(s): Robert P. Foglia, MD, FACS, Juan E. Ruiz, MHA, Lorrie S. Burkhalter MPH

Background: First Case on Time Starts (FOTS) are an important Operating Room performance metric. The study aim is to show how implementation of process improvement (PI) solutions and an electronic health record (EHR) led to a progressive, significant, and sustainable improvement in FOTS.

Predicting Readmission and Leak Rates Following Colectomy with Red Cell Distribution Width: A Simple but Effective Test

Published On: February 16, 2017 | Pages: 008 - 012

Author(s): Kyle G Cologne*, Loriel Liwanag, Bikash Devaraj, Elizabeth Arcila, Glenn T Ault, Adrian E Ortega and Anthony J Senagore

Introduction: Prediction of readmission as a result of either delayed presentation of infection, or worse an anastomotic leak is difficult.

Features of Oxygen Extraction Ratio and Temperature Homeostasis during Early Postoperative Period after Major Abdominal Surgery
In some situations, tissue hypoxia may exist despite normal values obtained by conventional haemodynamic monitoring such as arterial blood pressure, central venous pressure, heart rate, and urine output. The study was performed in early postoperative period after major abdominal surgery in 160 patients and was conducted in the following stages: 1-admission from ...
