Hypocalcemic Rachitic Stridor: A Neglected Warning Sign in Infants

Although stridor is a common respiratory symptom associated with upper respiratory diseases, yet its relation with hypocalcemia is not widely appreciated. The mechanism of hypocalcemia in causing stridor might be a collapsing of larynx most likely caused by decalcification due to hypocalcemia.

Cardiocutaneous Syndrome: The Tale between Heart and Skin

Cardiocutaneous syndromes are rare, genetically determined disorders in which arrhythmogenic cardiomyopathy is accompanied by characteristic cutaneous phenotypes of woolly hair and palmoplantar keratoderma.
