**Centrobolus silvanus dimorphism based on tergite width**

Published On: November 15, 2018 | Pages: 003 - 005

Author(s): Mark Cooper*

The forest genus Centrobolus of diplopoda belonging to the Order Spirobolida is distributed along the eastern coast of southern Africa. Sexual size dimorphism (SSD) can be explained as sexual selection and fecundity selection. Width and length were analysed in Centrobolus to derive SSD in 22 species. Width size of C. silvanus collected in South Africa was calculated a ...
