A Cross sectional Study on Clinicomycological Aspects of Mucocutaneous Candidiasis in a Tertiary Care Center

Published On: November 02, 2018 | Pages: 003 - 007

Author(s): Subhashini Mohan*, R Madhu and C Janaki

Background: Candida is an ubiquitous organism causing superficial fungal infections that are commonly encountered in clinical practice. The knowledge of the change in the epidemiology, clinical spectrum and antifungal susceptibility may aid for the appropriate treatment decisions. ...
The extended modified male Z-plasty necklift for correction of severe aging changes of the neck with secondary improvement of the lower third of the face

Published On: November 06, 2018 | Pages: 008 - 010

Author(s): Gary J Nishioka*

The male Z-plasty necklift (MZPN) is a well described procedure [1-4], specifically used for men with severe aging neck changes who cannot be achieve a satisfactory aesthetic outcome with other necklift procedures that are performed through a submental incision. ...
