Analysis of Risk Factors for Development of Hepatocellular Carcinoma in Chronic HBV - Infected Liver Cirrhosis Patients: A Meta-Analysis

Published On: August 22, 2017 | Pages: 034 - 040

Author(s): Xiang Lyu, Gaofeng Cai, Kui Liu, Sichao Huang, Jun Yao, Zhenggang Jiang, Zhengting Wang, Zhifang Wang*, Yongdi Chen*, Huakun Lv* and Jianmin Jiang*

The 5-year cumulative incidence rate of hepatocellular carcinoma (HCC) in chronic HBV -infected liver cirrhosis (LC) patients was up to 5%-30%. ...

A Study of Glucosylceramide Synthase and Glycolytic Pathway Enzymes in Patients with Hypereosinophilia

Published On: March 31, 2017 | Pages: 015 - 018

Author(s): Lisa Redmond, Paul Kennedy, Colm Buckley and Philip T Murphy*

Glucosylceramide synthase is the rate limiting enzyme in ceramide glycosylation and shifts the balance between ceramide and glycosphingolipids towards proliferation and survival of cancer cells. ...

Immunosuppressive and Cytotoxic Potential of Flavonoids from Medicinal Plants: Preliminary Investigation for Anticancer Activity

Published On: February 01, 2017 | Pages: 007 - 011
Author(s): Amit Gupta* and Revati N Chavan

Introduction: Attention related to scientific and research interest towards naturally derived compounds from medicinal plant products as they are considered to have less toxic side effects as compared to current treatments such as chemotherapy. ...
