Distribution of S. mutans and S. sorbinus in Caries Active and Caries Free Children by PCR Approach

Published On: June 05, 2015 | Pages: 027 - 030

Author(s): Harleen Soni*, Manasi Vasavada

Introduction Dental caries is one of the most common chronic infectious disease of childhood, caused by the interaction of bacteria, mainly Streptococcus mutans, and sugary foods on tooth enamel. These bacteria break down sugars for energy, causing an acidic environment in the mouth and result in demineralization of the enamel of the teeth and dental caries [1 1. ...

Peripheral Nerve Regeneration using Silicone Rubber Chamber Combined by Local Administration of Cyclosporin a in Streptozotocin Induced Diabetic Rats

Published On: May 16, 2015 | Pages: 019 - 026

Author(s): Rahim Mohammadi*, Hamid Shariati, Neda Sharghi, Maryam Naghipour

Introduction Surgical therapy in patients with peripheral nerve injuries has not presented changes over the last decades due to the use of autologous grafts, development of intraoperative magnification, and proven deleterious effects of tension at neural repair site and despite all the advancements achieved, functional repair results are still imperfect [1 1. Tuma ...
