**Sentinel Lymph Node Biopsy vs. Elective Neck Dissection in Patients with T1/T2 N0 Oral Squamous Cell Carcinoma: A Matched Pair Analysis**

Published On: August 05, 2016 | Pages: 047 - 051

Author(s): Guilherme Machado de Carvalho*, Vanessa Gonçalves Dias, Hugo Kohler, Carlos Takahiro Chone, Alexandre Caixeta Guimarães, Agrício Nubiato Crespo

Introduction Squamous cell carcinoma of the head and neck (HNSCC) spreads regionally to the lymphatic system [1]. An important prognostic factor for head and neck cancer is the lymph node metastasis, which may reduce five-year survival rate by 50% [2]. However, controversy still remains regarding the optimal techniques to determine if patients with a clinically neg ...

**A Retrospective Study of the AL Technology Implant System used for Single-Tooth Replacement**

Published On: July 09, 2016 | Pages: 039 - 046

Author(s): Muhamad Abu-Hussein*, Nezar Watted, Dror Shamir

Introduction The clinical success of dental implants is dependent on successful osseointegration. An important parameter for achieving osseointegration is the establishment of direct contact between the surface of the implant and the surrounding bone. There have been numerous studies indicating that implant surface roughness affects the rate of osseointegration [1-...
