The effect of Gauze Dressing use on reduction of Oronasal Fistula Rates following Cleft Palate Repair

Published On: February 22, 2019 | Pages: 001 - 004

Author(s): Fatma Bilgen*, Alper Ural and Mehmet Bekereciolu

Background: The most incident and the most persistent complication following cleft palate repair is oronasal fistula. Fistulas involving the soft palate may be corrected via excision and primary closure; however fistulas of the hard palate constitute a major challenge. Aims: In this study, in order to reduce the rate of oronasal fistula following cleft palate surgery ...
