Effectiveness of Radiotherapy in Heterotopic Ossification

Published On: December 30, 2015 | Pages: 029 - 032

Author(s): Yasemin Benderli Cihan* and Alaettin Arslan

Objective: Heterotopic ossification (HO) is a biological process characterized by de novo bone formation in tissues which should not undergo ossification in normal condition. Frequently, it is a complication that occurs after head injuries, spinal cord injuries, cerebrovascular events, burns, fractures, dislocations and joint replacements. ...
Various techniques are used in image-guided radiotherapy (IGRT). Cone beam computed tomography (CBCT) is widely used in IGRT on linear accelerators. The increased accuracy of IGRT enables reducing planning target volume margins and doses to normal tissues. However, for radiation therapies requiring fractionated irradiation, increased exposure dos...

Percutaneous Spine Biopsy: A Literature Review

Published On: December 10, 2015 | Pages: 023 - 028

Author(s): Ali Nourbakhsh*

Percutaneous spine biopsy has widely replaced open biopsy during the last 50 years. Closed biopsy is more cost effective, less invasive, and has fewer complications than open procedures. A literature search was conducted in PubMed for percutaneous spine biopsy. The contributing factors to the success of the biopsy were identified by reviewing the articles and th ...

Premature Ovarian Failure in a Patient with Robertsonian Translocation Rob (14;15): Is it only a Coincidence?

Published On: April 30, 2015 | Pages: 002 - 003

Author(s): Sebnem Alanya Tosun, Alptekin Tosun* and Enis Ozkaya

Women have fixed ovarian follicles after birth and the number of the follicles declines with age. The decrease can be regulated by genetic, hormonal and/or therapy procedures. Radiation exposure can lead to premature ovarian failure (POF). POF is defined as interruption of the ovarian function in an adolescent woman. ...
