New Technique to Avoid General Anesthesia during Brachytherapy for Cancer Cervix

Published On: December 30, 2016 | Pages: 025 - 028

Author(s): Ashraf H Hassouna*

Aim: To keep the cervical canal dilated after the first high dose rate (HDR) brachytherapy fraction to avoid general anesthesia during subsequent applications. ...
Aim: provide evidence concerning advantages of volumetric modulated arc therapy over intensity modulated radiation therapy. ...

Sclerosing Angiomatoid Nodular Transformation of the Spleen (SANT): CT and MR Imaging Features of Five Cases with Pathological Correlation

Objective: To describe imaging features of sclerosing angiomatoid nodular transformation (SANT) with pathologic correlation. ...

PSMA Accumulation in Benign Pleural Thickening

Prostate-specific membrane antigen (PSMA) is a specific type II membrane glycoprotein. We present the case of a 72-year-old man with newly diagnosed prostate cancer who had a 68Ga-PSMA PET/CT scan for staging. 68Ga-PSMA PET/CT images showed moderate uptake in the right hemithorax, corresponding to pleural thickening seen on the CT images. ...
Agenesis of the Corpus Callosum Associated with Persistent Primitive Olfactory Artery - Case Report and Literature Review

Published On: June 22, 2016 | Pages: 012 - 014

Author(s): Myoung Soo Kim*

Agenesis of the corpus callosum (ACC) is a congenital malformation that can occur in isolation or in association with other neurological conditions. However, to our knowledge, no cases of ACC associated with persistent primitive olfactory artery (POA) have been reported. ...

Abdominal-Pelvic Masses in Geriatrics: A Report about 02 Cases Explored at the Computed Tomography (CT)

Published On: January 09, 2016 | Pages: 001 - 003

Author(s): Kouame N*, Bakary YN, Manewa FS, Gaimou BP, Agoda AK, Ngoan Domoua AM and N’gbesso RD

Abdominal-pelvic masses are often described in children and make dread malignancy. In adults or in the elderly, these masses are less documented and are rarely bulky and therefore rarely the cause of abdominal pelvic distension. We report 02 cases of abdominal-pelvic masses encountered in subjects aged 76 and 91 years explored on the computed ...

Three Simple Software Extensions for Automatic Presentation of Radiation Induced Toxicity, Sequelae and Treatment Outcomes, for Increasing Safety in Daily Therapeutic Routine, and for Enhancing Patient Comfort

Published On: May 16, 2016 | Pages: 009 - 011

Author(s): Robert Michael Hermann*, Michael Schober, Ulrich Martin Carl and Mirko Nitsche
Background: Simple software extensions to already existing software-infrastructure can monitor treatment results, increase patient safety and enhance patient comfort in a very cost-effective way. ...
