Assessment of sexuality in patients with Peyronie’s disease

Abstract View | Full Article View | DOI: 10.17352/ijsrhc.000008

Introduction: Peyronie’s disease is an acquired fibrosis of the corpora cavernosa which causes deformation of the penis and represents one of the causes of erectile insufficiency with serious consequences for the life of a couple. The diagnosis is clinical and the treatment is medico-surgical. Objective: Evaluation of the sexuality of patients with Peyronie’s disease...
