Atraumatic Acute Limb Ischemia: Clinical Presentation, Classification, Assessment and Management- A Review

Published On: December 29, 2017 | Pages: 046 - 052

Author(s): Nalaka Gunawansa*

Acute Limb Ischaemia (ALI) can be a devastating clinical emergency with potentially life or limb threatening consequences. The commonest aetiologies of ALI are traumatic, embolic or thrombotic. While traumatic ALI is fairly obvious in the trauma victim, embolic and thrombotic ALI may mimic other clinical conditions such as neurological disease which may cause delays in ...
Primary Antiphospholipid antibody syndrome is a rare disease associated with thromboembolic events which may affect either the arterial or the venous vasculature. Acute myocardial infarction is rarely associated with APS, especially as first manifestation. We present here a case of primary antiphospholipid antibody syndrome in young man, which present as acute myocard ...
