Atraumatic Acute Limb Ischemia: Clinical Presentation, Classification, Assessment and Management - A Review

Published On: December 29, 2017 | Pages: 046 - 052

Author(s): Nalaka Gunawansa*

Acute Limb Ischaemia (ALI) can be a devastating clinical emergency with potentially life or limb threatening consequences. The commonest aetiologies of ALI are traumatic, embolic or thrombotic. While traumatic ALI is fairly obvious in the trauma victim, embolic and thrombotic ALI may mimic other clinical conditions such as neurological disease which may cause delays i ...
Primary Antiphospholipid antibody syndrome is a rare disease associated with thrombotic events which may affect either the arterial or the venous vasculature. Acute myocardial infarction is rarely associated with APS, especially as first manifestation. We present here a case of primary antiphospholipid antibody syndrome in a young man, which presented as acute myocardial infarction.

Diagnosis and indications for revascularization in Takayasu’s Arteritis: Report of two cases and literature review

Takayasu's arteritis (TA) is an inflammatory disease of large vessels that predominantly affects the aorta and its main branches such as supra-aortic trunks, renal and digestive arteries. The diagnosis is based on criteria proposed by the American College of Rheumatology and modified by Sharma. These vascular lesions present a problem of surgical indications because ...
