The Changes of Myocardium in Minipigs after Coronary Vein Ligation Observed by Transmission Electron Microscopy

Published On: May 03, 2017 | Pages: 020 - 022

Author(s): Juntao Wang, Haijia Yu, Huihui Song, Yapan Yang, Leiming Zhang, Hongxing Luo, Panpan Chen and Yinjie Chu*

Background: The study of coronary artery disease has been quite thorough. But there is few study on coronary vein disease. In clinical practice, some patients have suspicious symptoms of coronary artery disease without ...

“C” Trouble: Class IC Anti-arrhythmic Toxicity

Published On: June 30, 2017 | Pages: 033 - 037

Author(s): Maia Eng#, William Wung#, Uma N Srivatsa# and Gagan D Singh*

The most common cardiac arrhythmia encountered in clinical practice is atrial fi brillation (AFib). AFib has signifi cant effects on long-term mortality and stroke, and contributes greatly to overall healthcare costs, affects quality of life and the functional status of many patients [1]. ...

A rare case of Contusio Cordis: Fist fight leading to an Acute Myocardial Infarction due to Left Anterior Descending artery dissection
Cardiac lesions resulting from blunt chest injuries can present as cardiac contusion; ventricular free wall rupture; ventricular septal rupture; and valvular lesion [1]. ...

**Supraventricular Tachycardia: From Catheter to Catheter Ablation**

I had a privilege of having a really attentive and good medical student rotating through my cardiology office for a month. One day I explained to her in greater details that in spite of all the tests, devices and everything else, ...

**Large Thrombotic Coronary Artery Aneurysm Treated With a Covered Stent Using OCT for Procedural Guidance**

Coronary artery aneurysm (CAA) is an uncommon finding in patients undergoing a coronary angiography, with an incidence of less than 5% [1]. CAA is defined as coronary dilation of more than 1.5 times the adjacent vessel diameter. ...

**Postoperative Atrial Fibrillation and its association with the Atrial Substrate and**
Postoperative atrial fibrillation (AF) has a high prevalence, affecting up to 45% of coronary artery bypass graft surgery patients within the first week of the operation [1-4]. Interestingly, asymptomatic AF was reported more likely to occur after the first 4 days following the cardiac surgery. ...
