A combination of depression and decreased physical function further worsens the prognosis of patients with chronic cardiovascular disease

How Expensive is it to lose weight? - The financial cost of one such weight loss program

Opinion
Are ACE inhibitors and ARBs more beneficial than harmful in the treatment of severe COVID-19 disease?

Published On: May 05, 2020 | Pages: 101 - 103

Author(s): Christian A Devaux*

After starting in China four months ago, the COVID-19 pandemic now affects most countries and has already caused more than 200,000 deaths by April 26, 2020. Under chest computerized tomography scans, the majority of severe COVID-19 patients show bilateral ground glass-like opacities and subsegmental areas of consolidation indicative of pneumonia. If in its severe form ...
