Bacteriophage Based Assays for Detection of Salmonella Organisms

Published On: December 30, 2016 | Pages: 041 - 045

Author(s): Vimlesh Gupta and Hari Mohan Saxena*

Salmonellosis is an important zoonotic disease but field applicable, simple, accurate, and cost effective diagnostics are lacking. We isolated a broad acting bacteriophage lytic to Salmonella Typhimurium, S. Pullorum, S. Gallinarum and S. Dublin and investigated its application in diagnosis employing MTT assay and nitrate test. ...

Listeria Monocytogenes as a Foodborne Pathogen: Biocontrol in Foods using Lytic Bacteriophages

Published On: December 15, 2016 | Pages: 035 - 039

Author(s): Naim Deniz Ayaz*, Gizem Cufaoglu

Foods are playing a significant role in human infections because they are frequent vehicles of some human pathogens, which can spread in a short time to all the animals and are associated with cross contamination during production and processing. ...

Immobilization and Biochemical Properties of Purified Xylanase from Bacillus amyloliquefaciens SK-3 and Its Application in Kraft Pulp Biobleaching

Published On: December 15, 2016 | Pages: 026 - 034
In the present study, we studied the production and immobilization xylanase from Bacillus amyloliquefaciens strain SK-3. Isolate produced highest xylanase activity (56.2±1.6 IU/mol) at pH=8 and 40°C after 48 h incubation in presence of 1% wheat bran. ...
The residual tannins discharged from tanning units of the leather industry have an adverse effect on living organism and causes serious environmental pollution. Biological degradation is an important mechanism of organic chemical removal in natural systems owing to its environmental compatibility.

Comparison of hipO and ceuE Gene Based PCR Assays for the Detection of Campylobacter Jejuni

The objective of this study was to find out the reproducibility and specificity of hipO and ceuE genes based PCR assays for the detection of Campylobacter jejuni isolated from turkey meat samples in a previous study. A total of 44 Campylobacter isolates including 41 C. jejuni, two C. coli and one C. lari were used in this study. Although all of the C. jejuni isolates we...
Zika Virus Infection and a Missed Opportunity

Published On: December 29, 2016 | Pages: 040 - 040

Author(s): Viroj Wiwanitkit*

Zika virus infection becomes the big consideration in medicine at present since the infection can seriously affect the health of the infected person. ...
