Intravitreal Bevacizumab Injection Effect in Exudative Age Related Macular Degeneration

Published On: March 07, 2016 | Pages: 008 - 010

Author(s): Gholamhossein Yaghoobi* and Abbas Ataei Kachuei

Exudative age-related macular degeneration is the most common cause of vision loss of people over the age 60 in the developed countries. The cause is not clear yet, but since Avastin is largely used for the treatment, therefore, this study was conducted to assess the influence of avastin.

Anterior Segment Characteristics of Keratoconus Eyes Using Scheimpflug-Placido Topography

Published On: January 09, 2016 | Pages: 003 - 007

Author(s): Marian Fathy, Mohammed H El Agooz, Alahmady H Samman and Engy M Mostafa*

Purpose: To assess anterior segment parameters of keratoconus (KC) eyes at different stages of the disease using Scheimpflug-placido topography (Sirius, CSO, Italy) in a sample of the southern Egyptian population.

A Brief Editorial on Clinical Presentation and Treatment of Radiation Retinopathy Following Plaque Brachytherapy of Choroidal Melanoma

Published On: June 01, 2016 | Pages: 011 - 014

Author(s): Gholamhossein Yaghoobi* and Abbas Ataei Kachuei

Radiation retinopathy is a sight-threatening complication of radiation therapy for choroidal melanoma. It is characterized by the occurrence of retinal atrophy, neovascularization, and papilledema. This brief editorial aims to discuss the clinical presentation and treatment of radiation retinopathy following plaque brachytherapy of choroidal melanoma.
Treatment of choroidal melanoma with radiation plaque brachytherapy (Iodine, I\textsubscript{125}) avoids enucleation, salvages the globe, preserves the vision, achieves better local tumor control and prevents metastasis [1,2]. However, it can lead to complications such as keratitis, iris neovascularisation, cataract, radiation optic neuropathy, retinopathy, maculopathy and vitreous ...
