Prevalence of age Related Macular Degeneration in A Tertiary Care centre

Published On: May 23, 2019 | Pages: 007 - 010

Author(s): Jayashree MP, Harika JVL*, Arathi C, Brijesh A Patil and Niveditha RK

Background: Age-related macular degeneration (AMD) is one of the leading cause of irreversible blindness in elderly population affecting the quality of life and there by general health. AIM: The purpose of the present study was to estimate the prevalence, risk factors and subtypes of AMD in a hospital population attending to ophthalmology outpatient department.

Review Article
Ocular tuberculosis is an exigent clinical entity—lacking a distinct clinical presentation and attributing the diagnostic conundrum. Nevertheless, the early-precise diagnosis with implicated anti-tubercular therapy may be sight-saving; diagnostic delays often encountered due to protean clinical presentations, the impracticability of obtaining tissue (in most case), li ...

Trends in MacTel treatment: A vascular or neurological disease?

Idiopathic macular telangiectasia type 2 (MacTel) is known with temporal juxtafoveal retinal capillaries dilation and telangiectasia. The disease is most common in the fifth and sixth decades [1]. Patients often report a progressive bilateral visual loss. Macular transparency, retinal crystalline deposits, distribution of brown pigmented cells adjacent abnormal blood ...

Usefulness of Intravitreal dexamethasone implant in treatment of persistent cystoid macular edema due to Irvine–Gass syndrome

Introduction: Pseudophakic cystoid macular edema (CME) is one of the commonest causes of visual impairment after
uneventful cataract surgery. There is no standardized protocol for pseudophakic CME and cases with refractory or persistent CME remained therapeutic challenge. ...
