Beta-carotene status are co-related with pupillary diameter changes in obese & normal adults in relation to prediction of heart disease

Several studies have been conducted by antioxidant properties of the Beta-carotenes in relation to their ability like prevention to coronary diseases. Similarly, 3 out of 4 randomized studies have shown that higher intakes or higher blood concentrations of -carotenes are associated with the reduced risk of the Predictive Heart Disease (PHD). As vitamin A functions as ...

Paradoxical worsening of presumed tubercular serpiginous like choroiditis on anti-tubercular therapy

Choroidal tuberculosis may present as multifocal progressive or serpiginous like choroiditis. It is important to recognize these presentations as these eyes show good response to systemic antitubercular therapy. Paradoxical reaction in tuberculosis can occur in patients receiving antituberculous therapy (ATT). ...
Idiopathic macular telangiectasia type 2 (MacTel) is known with temporal juxtafoveal retinal capillaries dilation and telangiectasia. The disease is most common in the fifth and sixth decades [1]. Patients often report a progressive bilateral visual loss. Macular transparency, retinal crystalline deposits, distribution of brown pigmented cells adjacent abnormal blood ...
