**The Effects of Maxillary Protrusion on Pharyngeal Airway Dimensions**

Published On: September 08, 2014 | Pages: 001 - 003

Author(s): Abdolreza Jamilian*, Rahman Showkatbakhsh, Neda Borna, Letizia Perillo

Aim: The relationship between position of the maxillary structures caused by maxillary protraction therapy and airway dimensions has not been investigated as comprehensively as the skeletal changes. This study was conducted to evaluate the effects of treatment with a maxillary protraction appliance on upper airway dimensions. ...

**International Dental Aid and WWII**

Published On: October 27, 2014 | Pages: 011 - 013

Author(s): Xavier Riaud*

During the liberation of the camps, a great majority of the detainees died after eating abundantly within a short period of time. A thousand men died because the Americans and the Englishmen were totally bewildered and overwhelmed with what was in front of them. In good faith, they gave a great amount of food to the survivors without thinking of the dramatic consequen ...

**Dental Identifications of Adolf Hitler and Eva Braun**
Hitler [1] had very bad teeth and a very bad breath. Before the war, he asked Blaschke, his dentist, to immobilize his teeth with a dental bridge. He wanted that bridge to be placed for several years. Thus, Blaschke made an unusual and easy-to-recognize solid metal bridge. ...

Plagiarism and Ethics for Medical and Scientific Researchers

It is the responsibility of educators at medical institutions and departments to teach their students about writing ethics and best practices. The principle of good medical writing or scientific writing is a clear, brief, exact, and it should be honest presentation of the scientific ideas. ...
