Dental training in evidence-based dentistry: A replication study

In the area of education research, it is well-known that studies of a defined question are seldom replicated. Furthermore, e-learning resources with evidence-based content in dentistry have received relatively little attention from researchers. 

Solitary Median Maxillary Central Incisor Syndrome: An esthetic solution in a child
Solitary median maxillary central incisor syndrome (SMMCI) is a complex disorder consisting of multiple, mainly midline, defects of development resulting from unknown factors and an uncertain etiology. SMMCI tooth itself is chiefly an aesthetic problem. ...
