preeclampsia. Patients and methods: The current study is a case control study that was conducted over 90 cases of primigravida patients, 24-34 weeks of gestation, randomly selected patients from outpatient clinic and ER of Ain Shams Maternity Hospital ...
Intrauterine devices (IUD) are a highly effective and safe form of contraception. However, many individuals, particularly nulligravidas, elect against IUD use due to fear of pain associated with insertion. Misoprostol has been proposed as an agent to ease IUD insertion and decrease associated pain.

**Hysterotomy for Early Placenta Percreta at 10 Weeks Gestation: A Case Report**

Placenta percreta in early pregnancy is rare and only few cases are documented. We report a case of placenta percreta at 10 weeks gestation. Sonography revealed absence of line of demarcation between trophoblast and myometrium extending to the urinary bladder region.
