Author(s): Fatma Eskicioglu*, Muhammet Sakp Eskicioglu and Beyhan Ozyurt

Objective: During the postmenopausal period, visceral fat tissue is responsible not only for increased cardiometabolic risk, but also for endocrine function leading to increased endometrial thickness (ET). The current study aimed to 1) determine the predictive value of ultrasonographic visceral fat thickness (VFT) and the visceral adiposity index (VAI), which is defin ...

Evaluation of the histopathology results of patients operated due to Ovarian Mass

Published On: January 05, 2019 | Pages: 001 - 004

Author(s): Pervin Karl* and Asuman Kilitci

Introduction: Ovarian masses quite frequently appear before us in gynecological practice. In the present study, our purpose was to determine the types and age range of masses detected in ovarian surgeries in and around the city of Kırşehir. Material and Methods: The study was conducted in the retrospective fashion on the pathology reports of 93 patients, who had his ...
