Clinical Outcomes of Neuromyelitis Optica with Brain Magnetic Resonance Imaging Abnormalities

Published On: September 18, 2015 | Pages: 010 - 014

Author(s): hengqi Lu*, Yanxia Huang, Lei Zhang, Yinyao Lin, Yanqiang Wang, Bingjun Zhang, Xuejiao Men

Objective: To investigate clinical outcomes of neuromyelitis optica (NMO) patients with brain magnetic resonance imaging (MRI) abnormalities. Methods: One hundred and thirty-seven patients with NMO were enrolled. Clinical, laboratory, and MRI features were assessed and compared according to different distribution patterns of brain lesions. ...
Use of Repetitive Transcranial Magnetic Stimulation in Treatment of Negative Symptoms of Schizophrenia

Published On: December 26, 2015 | Pages: 017 - 021

Author(s): Gokben Hzl Sayar*, Huseyin Bulut, Nevzat Tarhan

In this review, we explore the evidence concerning the efficacy of repetitive transcranial magnetic stimulation (rTMS) to treat negative symptoms of schizophrenia. The majority of protocols have utilized high-frequency excitatory rTMS over the left dorsolateral prefrontal cortex (DLPFC) with limited therapeutic benefits in ameliorating negative symptoms. ...

Priorities in Movement Disorders Research

Published On: April 26, 2015 | Pages: 001 - 003

Author(s): Mabel M. Macas*, Criscely L. Go, Jose C. Navarro

Objectives: To analyze the patterns of movement disorders prospectively using the registry of movement disorders in our institution and to identify some research priorities. Background and purpose: Movement disorders are common reasons for consultation and referrals in our hospital. They are often thought to affect movement only. However, most patients also experienc ...

Anterior Tarsal Tunnel Syndrome with Presence of Accessory Deep Peroneal Nerve: Case Report

Published On: December 09, 2015 | Pages: 015 - 016

Author(s): Sanela Zuki*, Osman Sinanovi, Nermina Piri, Harun Brki, Mirsad Hodži, Renata Hodži, Mirza Baruija

Entrapment neuropathy of the deep peroneal nerve, also recognized as anterior tibial nerve, typically occurs at the anterior ankle and dorsal foot. Compression of this nerve, which anatomically is inferior to the extensor retinaculum, is commonly referred to as anterior tarsal tunnel syndrome. This syndrome is rare and remains poorly diagnosed among
