Complications of Hydatid Cysts in the Lung

Published On: May 29, 2015 | Pages: 023 - 028

Author(s): Ufuk Cobanoglu* and Selvi Asker

A hydatid cyst, or echinococcus, is a zoonosis frequently formed by the larvas of Echinococcus granulosus. The disease appears as a slowly growing cystic mass and is asymptomatic. The disease is common in the Eastern, Southeastern, and Central Anatolia regions of Turkey. The rate of incidence of the disease in Turkey is reported as 5.7 out of 100,000 individuals. ...

Transvaginal Extraction of Laparoscopic Right Hemicolecotomy Specimen

Published On: August 24, 2015 | Pages: 031 - 032

Author(s): Gonzalo Martin*, Mohammed Iyoob Mohammed Ilyas, José F Noguera and Valentine Nfonsam

Natural Orifice Specimen Extraction (NOSE) maintains the benefits of minimally invasive surgery obviating the need to extend the port site incisions for specimen extraction. We describe the technique of transvaginal extraction of a laparoscopic right hemicolecotomy specimen in sexually active 63 year old female. ...

Central Venous Catheter Impacted into the Tricuspid Annulus over a Quarter
A 58-year-old woman was referred for elective coronary bypass graft surgery (CABG). As an incidental finding, the coronary angiogram showed a radio-opaque linear foreign body in the superior vena caval-right atrial region; additionally to a significant flow-limiting multivessel coronary artery disease (Panels A, B). ...
