Arthroscopic Morphology of Labrum Tear in Recurrent Anterior Dislocation of Shoulder

Objective: Evaluate the characters of labrum tear morphology in recurrent anterior dislocation of shoulder via arthroscopy.

Risk and outcome of Sepsis Associated Encephalopathy after Acute Gastrointestinal Perforation

Sepsis associated encephalopathy (SAE) is the most common encephalopathy in ICU and may contribute to a high mortality. Few data are available on the risk and outcome of SAE after patients with gastrointestinal (GI) perforation.

Does the use of Bispecteral Index reduce the oxidative stress in Endoscopic Retrograde Pancreaticocolangiography?

Published On: September 06, 2017 | Pages: 046 - 049
Background: Endoscopic Retrograde Pancreaticocolangiography (ERCP) is performed for resolving cholestasis by sphincterotomy and/or stone extraction and is done with deep sedation or general anesthesia. ...
Introduction: Circumcision remains the commonest performed surgical procedure in outpatients. Circumcision with Plastibell is the most popular used method of circumcision among surgeons. ...
Purpose: The elbow bone traumas are very serious lesions that can compromise the function of this joint in the future. These lesions are most severe when there is a defect of bone which affects one component of the joint. ...
